Executive summary

This paper provides an overview of juveniles in detention in Australia. It contributes to knowledge about the numbers and rates of Indigenous young people placed into detention, a concern stemming from the Royal Commission into Aboriginal Deaths in Custody (RCIADIC 1991). The Australian Institute of Criminology (AIC) Juveniles in Detention Monitoring Program contains census data on the numbers of young people placed into detention on a quarterly basis from 1981 through to 2006. This report tracks changes over time and also provides a statistical overview of the financial year 2005–06.

The key findings from this report are that:

- Rates of detention for all young people aged 10 to 17 years have decreased by 55 percent since 1981. At 30 June 1981 there were about 65 detainees per 100,000 population compared with about 29 per 100,000 population at 30 June 2006.
- The biggest decline in detention rates for 10 to 17-year-olds was between 1981 and 2002. Rates appear to have stabilised since 2002.
- Rates of detention for both males and females have decreased since 1981.
- There has been a 46 percent drop in the number of male juveniles detained and a 78 percent drop in the number of female juveniles detained since 1981.
- The vast majority of young people in detention are male. At 30 June 2006 young males (92% of all juveniles detained) were 11 times more likely than young females to be in detention.
- The vast majority of 10 to 17-year-olds in detention have consistently been aged 15 to 17 years (83% at 30 June 2005 and 2006).
- The rates of detention (per 100,000) of Indigenous young people aged 10 to 17 years across Australia have decreased by 24 percent since 1994. The decline in rates for Indigenous young people was greatest between 1997 and 2002, and has stabilised since 2003.
- The rates of detention (per 100,000) of non-Indigenous young people aged 10 to 17 years across Australia have decreased by 38 percent since 1994.
- The over-representation of Indigenous young people relative to non-Indigenous young people in detention remains high. Indigenous young people were 21 times more likely than non-Indigenous young people to be in detention at 30 June 2006.
- Across Australia, the proportion of young people remanded in detention (as opposed to sentenced) has generally been about 50 percent since 2002, although this was slightly higher during 2005–06.
- Across Australia, about one-quarter of all people detained in juvenile detention facilities were aged 18 and over.

Chapter 1
Introduction and context

Introduction

This report provides a comprehensive overview of juveniles in detention in Australia from 1981 to 2006. It includes an analysis of the number and rate of juveniles in detention over time (with respect to a number of different variables), as well as a detailed analysis of the 2005–06 financial year. Statistics are derived from the Australian Institute of Criminology's (AIC's) Juveniles in Detention Monitoring Program dataset.

The juveniles in detention dataset is compiled from reports submitted on a quarterly basis by the relevant juvenile custodial authorities in each Australian jurisdiction. These authorities include:

- Department of Juvenile Justice, New South Wales
- Department of Corrective Services, New South Wales
- Department of Human Services, Victoria
- Department of Communities, Queensland
- Department of Corrective Services, Western Australia
- Department for Families and Communities, South Australia
- Department of Health and Human Services, Tasmania
- Northern Territory Correctional Services
- Office for Children, Youth and Family Support, Australian Capital Territory.

In November 2004, responsibility for the Kariong Juvenile Justice Centre was transferred from the NSW Department of Juvenile Justice to the NSW Department of Corrective Services. In December 2004, the Kariong Juvenile Justice Centre was proclaimed a juvenile correctional centre for offenders between the ages of 16 and 21 years (NSW Ombudsman 2005). For purposes of consistency in this report, the NSW Department of Corrective Services has provided the AIC with the quarterly numbers of young people detained at Kariong Juvenile Correctional Centre commencing in 2005 through to June 2006. These numbers are included in this report, which means that the numbers of juveniles in detention in New South Wales commencing March 2005 comprise numbers from both the Department of Juvenile Justice and the Department of Corrective Services in New South Wales.

Each of the above authorities was provided with a copy of this report prior to publication and given the opportunity to comment. It should be noted that although this report provides data on juveniles in detention, the vast majority of juveniles in the care of juvenile justice agencies are not placed into detention but rather are placed under community supervision orders or other types of orders. It is important to keep this in mind when interpreting the data on juvenile detention in this report.

The Juvenile Justice National Minimum Data Set (JJNMDS), administered by the Australian Institute of Health and Welfare, collates and provides flow data about juveniles who are placed on community and supervision orders, as well as detention (AIHW 2007). The detention data between the two datasets differ, however, as the AIC data are quarterly census data, not flow data. The JJNMDS also does not include data on juveniles who are detained at Kariong Juvenile Correctional Centre. The JJNMDS provides information about young people under the care of juvenile justice agencies. The AIC Juveniles in Detention Monitoring Program provides information about all young people detained in correctional facilities across Australia.

Data collected

The data provided by each of the above agencies contain information on the number of young people in the custody of the juvenile justice/corrective agency on the last day of each quarter of the year; that is, 31 March, 30 June, 30 September and 31 December. This is therefore a census count taken on each of these dates and reflects only the number of juveniles in detention in each jurisdiction at that time. The data are not necessarily representative of the actual daily average of juvenile detainees in each state or territory (the JJNMDS records daily data). As a result, some jurisdictions, in particular smaller ones such as the Australian Capital Territory, Northern Territory and Tasmania, may show greater variability among quarters in this report.

The original counting rules specified the count to be conducted at midnight on the last day of each quarter, which was consistent with the rule used by the Australian Bureau of Statistics (ABS) in its *Prisoners in Australia* publication. The ABS specifies that the prison census is of all persons in custody 'as at midnight 30 June', with midnight referring to 'the night of 30 June' to differentiate it from the morning of 30 June. However there is some slight variation among jurisdictions as to the timing of their counts for juveniles in detention. While New South Wales, Victoria, Western Australia, Queensland, Australian Capital Territory and Northern Territory conduct their count at midnight on the last day of each quarter (as per the ABS), Tasmania and South Australia conduct their count at 7.00am on the last day of each quarter. This caveat should be borne in mind when comparing Tasmania and South Australia with other jurisdictions.

The quarterly census provides aggregate information on the number of juveniles detained according to six variables:

- sex
- age
- Indigenous status (Indigenous, incorporating both Aboriginal and Torres Strait Islander peoples, or non-Indigenous)
- legal status (remanded or sentenced). Western Australia and Queensland have a further category of remanded and sentenced, which includes young people under sentence who are awaiting trial or sentence on other charges. In this report these persons are categorised as sentenced
- jurisdiction
- quarterly census date.

The data provided to the AIC comprise the total number of juveniles in detention and the number of Indigenous juveniles in detention. The number of non-Indigenous juveniles in detention is assumed to be the difference between the two. However, it is possible that Indigenous status for some young people may be unknown – these young people are classified as non-Indigenous, which means that the proportion of Indigenous juveniles in detention may be underestimated in this report. The JJNMDS reports separately on the number of young people where Indigenous status is unknown.

Differences among jurisdictions

Each Australian state and territory has a separate formal juvenile justice system of which detention is one part. Differences among them should be acknowledged prior to describing the data. These differences primarily relate to the way in which jurisdictions:

- define a juvenile offender
- manage a juvenile offender (particularly once they reach adulthood).

Juveniles in Australia are largely dealt with by the juvenile justice system when they are aged between 10 and 17 years. Victoria changed its definition of a juvenile to 10 to 17 years with effect from 1 July 2005, bringing it into line with all other jurisdictions except Queensland. Queensland defines a juvenile as being aged 10 to 16 years. In order to facilitate useful comparisons, this report focuses on detainees aged 10 to 17 years (since this is the most common definition). To provide complete data however, Table 1 contains information on persons aged 18 and over in juvenile detention centres in Australia at 30 June 2006.

Excluded from the table and the results presented in this report are those young people aged under 18 in adult prison. Twenty-nine persons aged under 18 were in prison at 30 June 2006 (ABS 2006a).

Table 1: Jurisdictional differences in the definition of a juvenile and detention of those aged 18 and over at 30 June 2006

State/territory	Age of juveniles	Number of persons aged 18 or over in juvenile detention facilities
New South Wales ^a	10–17	81
Victoria	10–17	86
Queensland	10–16	3
Western Australia	10–17	4
South Australia	10–17	10
Tasmania	10–17	1
Northern Territory	10–17	0
Australian Capital Territory	10–17	5
Australia		190

a: The number for New South Wales includes Kariiong Juvenile Correctional Centre. Data provided by the NSW Department of Corrective Services
Source: AIC Juveniles in Detention Monitoring Program 1981–2006 [computer file]

Differences among jurisdictions are clearly noted in the management of older juveniles, particularly with respect to those who have become adults while in juvenile detention. New South Wales and Victoria have traditionally detained juvenile offenders in a juvenile detention centre until completion of their sentence, resulting in numerous detainees of an adult age – 81 in New South Wales and 86 in Victoria at 30 June 2006. The Victorian figures include young people aged 18 to 20 sentenced to juvenile detention as part of a dual-track approach. This is the main reason for the high Victorian numbers in this age group.

NSW data

In January 2002, the *Children (Criminal Proceedings) Amendment (Adult Detainees) Act 2001* commenced in New South Wales. The objective of the Act is to limit the age at which young people can remain in juvenile custody by providing that a juvenile offender convicted of a serious children’s indictable offence must not remain in juvenile custody beyond the age of 18 unless the court finds special circumstances to justify otherwise. In addition, no individual may remain in juvenile custody beyond the age of 21 years and six months. However, a review of the Act concluded that the number of persons over the age of 18 years in juvenile custody in New South Wales had not declined since the Act commenced and had in fact increased (NSW Ombudsman 2005). The review questioned the effectiveness of the legislation, concluding that ‘the legislation does not appear to be achieving its stated objective of separating young adults from juveniles’.

Since publication of the report, the NSW Department of Juvenile Justice notified the Ombudsman that the data it supplied for the years 2004 and 2005, which were relied on and reproduced in the report, were inaccurate. The Department’s data now indicate that 34 percent of all detainees in juvenile justice centres as at 30 June 2004 were 18 years and over, and at 30 June 2005 the proportion was 33 percent.

While these corrected figures still represent an increase in the number of adults in juvenile detention under the supervision of the NSW Department of Juvenile Justice during the first three years of operation of the new legislative provisions, this increase has since decreased with the proportion being 23 percent at 30 June 2006 (excluding those detained at Kariong Juvenile Correctional Centre), or 24 percent at 30 June 2006 (including Kariong Juvenile Correctional Centre). The new legislation, therefore, does appear to be having an impact.

Victorian data

On 1 July 2005, Victoria increased the age jurisdiction for the Children's Court to include 17-year-olds. Victoria has a dual-track system of adult prison and juvenile detention for persons aged 18 to 20 years at the time of sentencing, with an option for some people in this age group to be placed into a senior youth training centre. Table 1 shows that at 30 June 2006, there were 86 people aged 18 or over in juvenile detention centres in Victoria. This comprised 69 percent of all persons in juvenile detention facilities in Victoria.

Northern Territory data

Until June 2000, the Northern Territory classified 17-year-olds as adults. This may need to be taken into account when examining historical data on the number of juveniles in detention in the Northern Territory.

Tasmanian data

In 2003, the Tasmanian Department of Health and Human Services reported that the data relating to Indigenous detainees for the years 1996–97 to 2000–01 – provided to and published by the AIC – may be inaccurate due to the limitations of their previous data system's reporting capabilities. These data are therefore not reproduced here. However, data by Indigenous status have been provided since 2003 and the relevant information has been included in this report.

Calculating rates of detention per head of relevant population

The population estimates used to calculate the number of people aged 10 to 17 in detention per 100,000 population aged 10 to 17 are taken from *Population by age and sex* (ABS 2006b) for 30 June of each year. For statistics from 1991 to 2000, Indigenous population figures are based on high-level estimates, June 1996 to June 2006 (ABS 1998). For statistics from 2001 to 2006, Indigenous estimates are based on high-level estimates, June 2001 to June 2009 (ABS 2004). High-level estimates of the population are derived from projections of both natural population growth and an increased propensity for Australians to identify as Indigenous. The AIC uses high-level estimates for all figures relating to Indigenous detention rates, since these provide a more conservative estimate of rates and ratios.

The ABS does not publish these population estimates in the detail required for this report. The AIC therefore purchases statistics from the ABS that are based on these projections. Prior to 1996, a number of different sources of Indigenous population figures were used.

Indigenous over-representation

Indigenous over-representation refers to the fact that Indigenous persons in Australia are subject to higher rates of incarceration than non-Indigenous persons. Two methods may be used to calculate over-representation: the population ratio and rate ratio.

The population ratio refers to the proportion of Indigenous juveniles in juvenile detention centres compared with the proportion in the general population. For example, if Indigenous juveniles comprised two percent of all juveniles in Australia, then it would be expected that they would make up two percent of the detained juvenile population, other things being equal. If Indigenous juveniles actually made up four percent of this detainee population, the ratio – using the population ratio method – would be $4/2=2$, which can be expressed as ‘There were twice as many Indigenous juveniles detained as might be expected from their representation in the general community’.

The rate ratio method refers to a comparison of two rates: the detention rate per 100,000 of Indigenous juveniles, and the detention rate per 100,000 of non-Indigenous juveniles. At 30 June 2006, there were 315.1 Indigenous juveniles detained per 100,000 Indigenous juveniles in the population. On the same date, there were 15.1 non-Indigenous juveniles detained per 100,000 non-Indigenous juveniles in the population. Using these rates, the over-representation ratio is $315.1/15.1=20.9$, which may be expressed as ‘Indigenous juveniles were 21 times more likely than non-Indigenous juveniles to be detained in a juvenile justice centre’.

This report uses the rate ratio method for calculating over-representation, as has been done in previous reports (Cahill & Marshall 2002; Carcach & Muscat 1998; Bareja & Charlton 2003; Charlton & McCall 2004; Taylor 2006; Veld & Taylor 2005).

Chapter 2
Juveniles in detention by sex and age

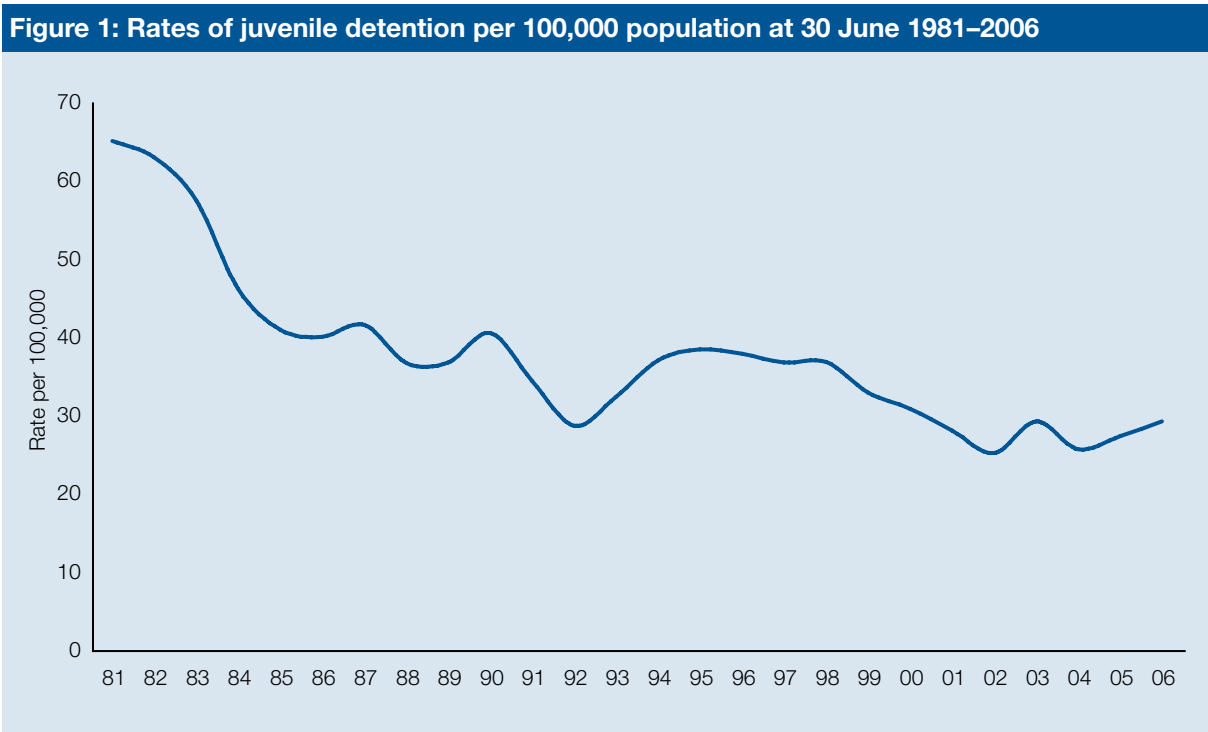

Summary of findings and trends, 1981–2006

There has been a general decline over the 25 years since 1981 in the number and rate of persons aged 10 to 17 in juvenile detention in Australia (Figure 1). While the downward trend was most evident between 1981 and 2002, rates appear to have stabilised since. Tables 2 and 3 show that both the numbers and rates of detention for both males and females have decreased considerably since 1981. There has been a 46 percent drop in the number of male juveniles detained since 1981 (Table 2) and a 78 percent drop in the number of females detained since 1981 (Table 3). Young men have always been over-represented in juvenile detention, with young women consistently comprising only a small proportion of the total persons detained. At 30 June 2006, young males were 11 times more likely than young females to be in detention.

Table 4 demonstrates that at 30 June 1981, a total of 1,352 young people were detained across Australia compared with 651 young people at 30 June 2006 (a 52 percent decline). The period of greatest consecutive decline occurred between the years of 1981 and 1989, where the number of detainees reduced by 44 percent to 759.

Similar to the trends observed in the numbers of persons aged 10 to 17 in juvenile detention, decreases in the rates of juveniles in detention have also occurred, with the rate declining by 55 percent since 1981 (see Table 4 and Figure 1). At 30 June 1981, there were about 65 detainees per 100,000 population compared with about 29 per 100,000 population at 30 June 2006.

Table 5 shows that the proportion of young females in detention has been declining, with eight percent of juveniles in detention being female at 30 June 2006 compared with 17 percent at 30 June 1981. The period of greatest decline was during the years of 1981 and 1991, where the percentage of the detainee population that was female decreased from 17 to 6 percent.

Age of juvenile detainees

Tables 6 and 7 provide information about the number of juveniles in detention in the age groups 10 to 14 years and 15 to 17 years. The vast majority (83% at June 2006) of young people detained in juvenile facilities across Australia are in the older age group. There are also jurisdictional differences in terms of the Indigenous composition of each age group, with Indigenous young people making up the majority of the 10 to 14-year age group in Queensland, New South Wales and Western Australia at 30 June 2006.

Chapter 3
Indigenous rates and over-representation

Rates of Indigenous detention

This section presents data on the number and rates of Indigenous detention (per 100,000 relevant population) from the first quarter of 1994 through to the second quarter of 2006. With the exception of Tasmania (whose Indigenous data are incomplete from the third quarter of 1996 through to the end of 2002), all jurisdictions were able to provide data on Indigenous status from the beginning of 1994. In this section, no Tasmanian figures are presented for either Indigenous or non-Indigenous persons after the 1995–96 financial year until 2003, and all Australian totals given by Indigenous status during this period exclude Tasmania ('total persons' figures include Tasmania). Similarly, rates calculated for Indigenous or non-Indigenous persons since 1996–97 have used population estimates that exclude Tasmania.

When looking at the numbers and rates of Indigenous juvenile detention by jurisdiction, it is important to note that jurisdictions differ in terms of their Indigenous juvenile compositions. Figure 2 shows that Indigenous people aged 10 to 17 comprised about five percent of the total Australian juvenile population at 30 June 2006. Victoria has the lowest relative Indigenous juvenile population (one percent) while the Northern Territory's Indigenous juvenile population comprises 44 percent of its total juvenile population. The numbers and rates of Indigenous juvenile detention presented in this section need to be interpreted in the context of these jurisdictional differences.

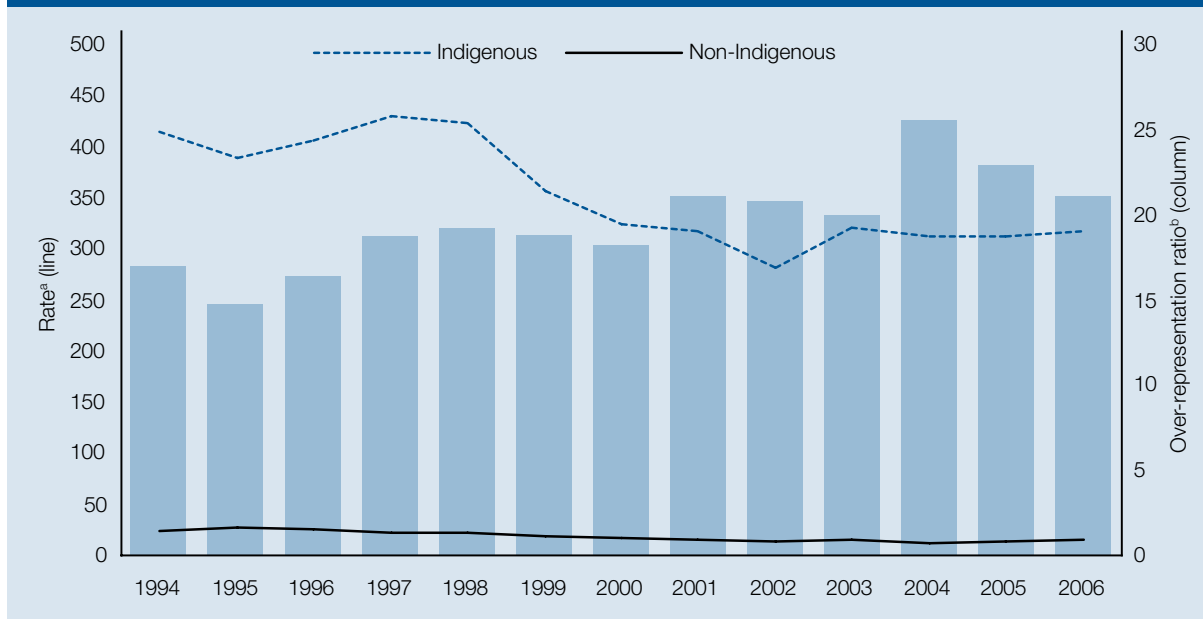

Figure 2: Proportion of 10 to 17-year-old Indigenous persons within each jurisdiction and across Australia at 30 June 2006 (percent)

Source: ABS 2004, 2006b

Figure 3 shows that the rates of detention for both Indigenous and non-Indigenous young people have declined since 1994 (Indigenous rate down by 24% and non-Indigenous rate down by 38%). The decline for Indigenous young people was greatest between 1997 and 2002, and has stabilised since 2003. However, the rate ratio of Indigenous over-representation remains high, with Indigenous persons aged 10 to 17 years still 21 times more likely to be in detention than non-Indigenous persons of the same age group, although this has begun to trend downward since 2004.

Figure 3: Indigenous and non-Indigenous persons aged 10 to 17 in juvenile detention in Australia (rate) and Indigenous over-representation (rate ratio) at 30 June 1994–2006

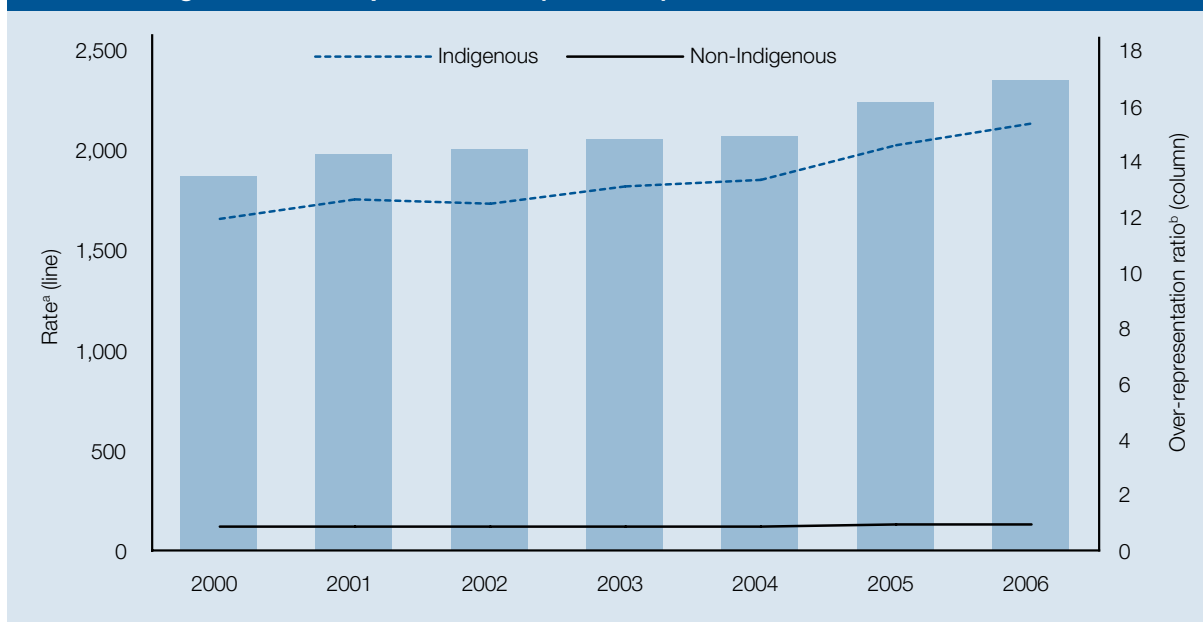

a: Rate per 100,000 relevant population

b: Rate ratio (Indigenous rate divided by non-Indigenous rate)

Source: AIC Juveniles in Detention Monitoring Program 1981–2006 [computer file]

The decline in rates of Indigenous juvenile detention between 2000 and 2002, and the relative stability of rates since 2003, is in contrast to rates of imprisonment for Indigenous adults (Figure 4). Since 2000, rates of Indigenous adult imprisonment have been increasing, as has the over-representation ratio.

Figure 4: Adult Indigenous and non-Indigenous imprisonment in Australia (rate) and Indigenous over-representation (rate ratio) at 30 June 2000–06

a: Rate per 100,000 relevant population

b: Rate ratio (Indigenous rate divided by non-Indigenous rate)

Note: Rates for earlier years not available

Source: ABS 2006a

Tables 8 to 11 provide data on the numbers and rates of young people in juvenile detention for each quarter since the beginning of 1994, by Indigenous status and jurisdiction. Tables 12 and 13 provide the total numbers and rates of 10 to 17-year-olds in detention for each quarter since 1994. At 30 June 2006, there were 315.1 Indigenous persons and 15.1 non-Indigenous persons per 100,000 aged 10 to 17 detained in detention centres across Australia. This is equivalent to a rate ratio of 20.9, meaning that Indigenous young people were 21 times more likely to be detained per population than non-Indigenous young people.

Indigenous over-representation by jurisdiction

Table 14 presents over-representation rate ratios of young people in detention by jurisdiction and across Australia as at 30 June each year from 1994 to 2006. Figures 4 to 11 illustrate these trends. The rate ratio (the Indigenous rate divided by the non-Indigenous rate) shows that over-representation of Indigenous young people aged 10 to 17 in detention across Australia remains high and has not decreased since 1994.

It is important to recognise that rates of detention and the resulting over-representation ratios can be highly variable in states and territories with:

- small populations of Indigenous people
- small numbers of people in juvenile detention
- small numbers of Indigenous people in juvenile detention.

These issues are particularly relevant to Tasmania, Northern Territory, Australian Capital Territory and Victoria. Over-representation ratios reflect the rates of Indigenous juveniles in detention relative to the rates of non-Indigenous juveniles in detention. This means that a high over-representation rate ratio may be due to an unusually high number of Indigenous persons in detention relative to non-Indigenous persons or an unusually low number of non-Indigenous persons in detention relative to Indigenous persons. Over-representation ratios should be interpreted along with the rates presented in Tables 9 and 11.

As at 30 June 2006 (Table 14) Indigenous young people were over-represented in detention in:

- Western Australia (Indigenous young people were 32 times more likely to be detained per population)
- New South Wales (23 times)
- Queensland (15 times)
- South Australia (13 times)
- Victoria (12 times).

Table 14: Over-representation of Indigenous young people aged 10 to 17 in juvenile detention at 30 June 1994–2006 (rate ratios)

It can be seen from Figures 5 to 12 that New South Wales depicts the trend most consistent with national figures. This is to be expected given that New South Wales, with its large population, impacts heavily on national trends.

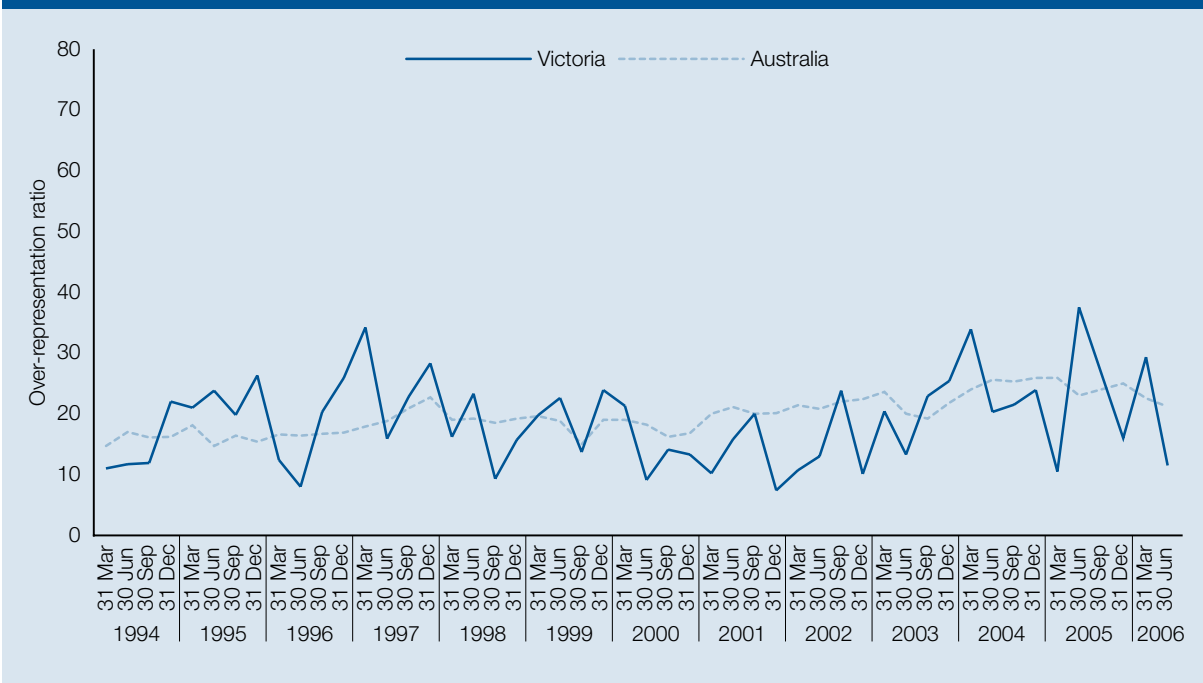

While levels of Indigenous over-representation remain high, it is important to note that over-representation levels reflect rates of Indigenous persons in detention *relative* to non-Indigenous persons. Figure 3 has already shown that overall rates of both Indigenous and non-Indigenous young people in detention per population have been decreasing since 1994. It is important to look at both rates of detention and over-representation ratios when assessing the involvement of Indigenous young people in detention, as well as quarterly fluctuations.

Chapter 4
Statistical review: financial year 2005–06

Statistical review: 2005–06

This section presents a statistical overview of the numbers of young people in detention in 2005–06, categorised by sex, Indigenous status, whether remanded or sentenced, and jurisdiction. It also presents information on the numbers of young people aged 18 and over in detention for the four quarters of 2005–06. Tables 15 to 17 present information on the numbers and rates of males and females aged 10 to 17 in detention, by Indigenous status, for the four quarters of 2005–06. This information is provided by jurisdiction, and it can be seen that:

- Western Australia and New South Wales, on average, had the highest rates of Indigenous male detention while Victoria had the lowest
- the Northern Territory had the lowest number of females in detention, and none on the census dates for the first two quarters
- Victoria recorded the lowest rates of detention at 30 June 2006 for Indigenous, non-Indigenous and total young people aged 10 to 17 years.

Persons aged 10 to 17 remanded or sentenced by jurisdiction

Table 18 shows the numbers of males and females aged 10 to 17 who were in juvenile detention due to being remanded or sentenced. Across Australia over half of young people (58%) detained at 30 June 2006 were remanded in custody awaiting trial/sentencing.

Tables 19 to 21 show the percentages of males, females and total juveniles in detention who were remanded as opposed to sentenced. For three out of the four quarters in 2005–06 Victoria had the lowest remanded percentages of detainees aged 10 to 17 years (Table 21). This may be due to the diversionary focus of the Victorian juvenile justice system, which aims to reduce instances of custodial remand. The next lowest percentages of remanded detainees in 2005–06 were in South Australia and the Northern Territory. The highest percentages over the year were in Queensland and Tasmania, where more than 50 percent of detained juveniles were remanded. Figure 13 shows that across Australia the proportion of young people remanded in detention has generally been about 50 percent since 2002, and this has started to trend upward slightly over the 2005–06 year.

Persons in detention aged 18 and over

Table 22 presents data on the number of persons in juvenile detention during 2005–06 who were above the defined age for a juvenile in this report (18 years or over). Jurisdictions vary in how young people are dealt with after reaching adulthood; that is, whether they can continue their sentence in juvenile detention or are transferred to an alternative correctional facility.

While Victoria and New South Wales have consistently had the highest numbers of adults in juvenile detention, Table 23 shows that Victoria's juvenile detention population has a much higher proportion of people aged 18 and over compared with New South Wales. For all four quarters of 2005–06 more than half of those detained in juvenile detention facilities in Victoria were aged 18 years and over compared with less than one-third in New South Wales. This reflects the fact that Victoria has a dual-track system for the adult court that allows offenders aged 18 to 20 appearing in the adult court to serve terms of detention in a juvenile justice facility. The proportions of the detainee population aged 18 years and over in other jurisdictions were considerably lower. Nationally it was about one-quarter. The Northern Territory had no-one detained aged 18 or over.

Total persons in juvenile detention (all ages)

Tables 24 to 26 show the numbers of males, females and total persons of all ages detained in juvenile detention facilities across Australia during 2005–06. Figure 14 shows the proportion of all persons detained by jurisdiction, averaged over the four quarters. The largest numbers of people detained were in New South Wales, which accounted for about 40 percent of all persons detained in 2005–06, followed by Victoria (17%), Queensland (15%) and Western Australia (14%).
